

On-site Network Audit

An on-site industrial network health check by one of our experienced Support Engineers.

A network audit comprises of an in-depth analysis, using our specialist industrial network diagnostics tools and visual inspections to help you understand the current health of your industrial network(s), allowing you to take preventative measures that increase reliability and mitigate industrial network downtime.

Our post-audit report will detail our findings together with any necessary and/or recommended corrective actions.

Service Outcome

- Gain insights into your industrial network's health
- A comprehensive network audit in line with guidelines
- Detailed report with recommendations
- Ensure robust industrial networks
- Understand how to use HMS Networks solutions efficiently and successfully

Client Challenges

- Unidentified network interruptions impacting operations
- Limited expertise in performing accurate network measurements
- Insufficient time and resources to address issues effectively
- Network design and installation guidelines in mixed infrastructures

Service details

- Seamless project delivery by a global team of service engineers
- This service is delivered on-site
